Title: Zombiefied Hamlet - Escape Protocol

Game Overview:

The game centers around a survivor (the player) trying to escape from a zombie-infested mall. To survive, the player must reach the end of the mall and unlock a final door that requires a specific number of coins. Along the way, first-aid kits and food items can be collected as bonus resources to aid in survival. Zombies roam the mall and will always pursue the player using the shortest available path. The player must evade the zombies and strategically use any available bonuses to make it out of the mall alive. The player's score is determined by how quickly they manage to escape.

Core Gameplay Elements:

This part of the document will explain the different aspects of the video game:

- *The Main Character:* The main character of the game would be a survivor trying to make his way out of a mall full of zombies using any means necessary. The survivor can move in any direction he wants unless there are walls to stop him.
- *The Enemies:* The game will consist of 2 types of enemies.
 - *The Zombies:* The zombies are the main enemy in the game and will always pick the shortest path to get to their target (the player). The player must move quickly so as to avoid getting piled on by the zombies tailing them. They will deal 2 ticks of damage to the player (the player will have 3 ticks in total).
 - *Acid Puddles:* These will be our stationary enemies located in different places on the map, clearly visible but will deal 1 tick of damage if the player walks over one of them.
- *Rewards:* The game will consist of 2 types of rewards.
 - *Coins (regular reward):* These are key items to be collected by the player in order to gain access to the exit. The faster the player collects these makes their way to the exit, the higher the score will be.
 - *Food and First-Aid (bonus rewards):* These are the bonus items, which aren't necessary for the player to collect in order to win but can come in handy in the time of need. If the player has taken damage, they can collect these items to gain their health back (First-Aid kits will heal for 2 ticks and food will heal for 1 tick).
- *Barriers:* The mall is full of walls and barriers for the player to navigate through in order to reach the end. Neither the player nor the zombies can go through these walls. There is also an outer wall on all sides which prevents the player from going out.
- *Board:* The game is a top down view, the game would first showcase the map and initial spawn points of the zombies and locations of the puddles. The screen size has not been determined yet. As for the UI the HUD of the game would display the coins, the timer and the score for the player along with the health bar. The HUD would also display the movement inputs of the player.
